Just a comment that the method is wildcarded automatically, not sure if that is important or not (e.g. nc7.germs becomes nc7.germs%). Maybe they always would enter the full name so doesn't matter. -q

Lisa,

I put a quick version up on dev, take a look. The other reports you sent me are a way lot more involved and would be stressing the Web Reports Tool's capabilities. I will take a deeper look though. Who and how generates the ones you sent me. -q

Subject: Question on making a report on the PW for germination method

On our order packets we have the germination method along with a link to the particulars of the method that goes to our (NC7) website. This is not a dynamic list and must be maintained by someone at the station.

[cid:image001.png@01D2E387.D35181B0]

My question is: Can a report on the PW be made that would allow the interested party to look up the method?

Something that looks like this report:
