---

Kurt Endress is maintaining that dataview - I have looped him in on this conversation to give him a heads up.

Kurt... the 'order_wizard_get_order_request_item' dataview is using different SQL than the 'get_order_request_item' for the 'Geography' field. It appears that Stacy and Laura would prefer to see the SQL from the Order Wizard used for the CT dataview as well.

Lisa or Stacey... Would you please create a Trac ticket for this? Thanks.

Regards,
Pete

I very much agree with Stacey.

Then maybe the field needs a different name? In other accession/inventory-based dataviews, Geography refers to the accession source geography. The accession source Geography field is displayed in the order wizard.

From my perspective, the Order Items table should include the accession source geography and this lesser-used field (item geography?) should be renamed so it is less confusing.

**Subject:** Re: geography field in order item table

This it the geography for the order item source (in the rare case where NPGS does not have this inventory but someone else does). It is a rarely used field - out of the 9,735,729 records in the order_request_item table only 3647 records have the item source cooperator_id populated.

**Subject:** RE: geography field in order item table

I would want it to be the geography that is in the src table etc. All columns named “geography” should have the some information in them.

That would save me having to also pull in inventory or source and deleting all the non-useful columns when wanting to give more complete information to someone asking for a list of his ordered items (such as Benoit)

No, Pete might be able to give some insight.

The scroll over indicates this is the cooperator geography, not the inventory geography

Stacey,

Do you know why the geography column blank in the order item table?
