Hi Lisa,

I am back from vacation and am just now able to respond to this. I do think it would be useful for a web availability note to show up even when unavailable. Similar to what you mentioned, we too have some accessions that aren't available for general distribution but may be available in certain circumstances. We have some accessions in the field that have viruses and other accessions of the same cultivar kept clean in the screen-house. The field accession is listed as unavailable but sometimes a pathologist wants material from the field accession because it has a pathogen rather than a clean accession of that cultivar. I also agree that once we have seasonal availability, it may be nice to have use of the note though I realize that there is still a lot to work out in how all of that fits together.

Thanks,
Jenny

Seems that having the accession availability note visible even when the accession is not orderable might be worth considering.

Subject: RE: Feedback on web availablity note

We have some notes that I'm trying to get answers about from the respective curators as to whether they need the notes to appear or not. I'm thinking that they would want the verbiage to be seen on the PW in the fashion of #1.

Subject: Feedback on web availablity note

Want to get some feedback on the web availability note field. Is there a case where an unavailable accession would need to have the web availability note visible? in the example below. I added a test note to the accession when it has an available lot. The second image is that same accession, but I made it unavailable.

The reason I'm asking for feedback is that we have an accession that would be available but only under certain circumstance, so the curator wanted it unavailable but still have the potential for distribution for research.

I'm think ahead to the seasonal availability issue that we will tackle once we finish with multiple form type issue. If we have seasonal availability and want the accession orderable only during certain times of the year, is the ability to have the web availability note regardless of "Is available = Y" needed?
