Test 3

Made a new tab and some new lists with items; they were deleted when I clicked the **Save User Settings Now** button. When the **Save User Settings Now** button is clicked, the **Navigator Tab Properties** box displays. If you enter text in the box and click OK, it then kills the current List Panel tab.

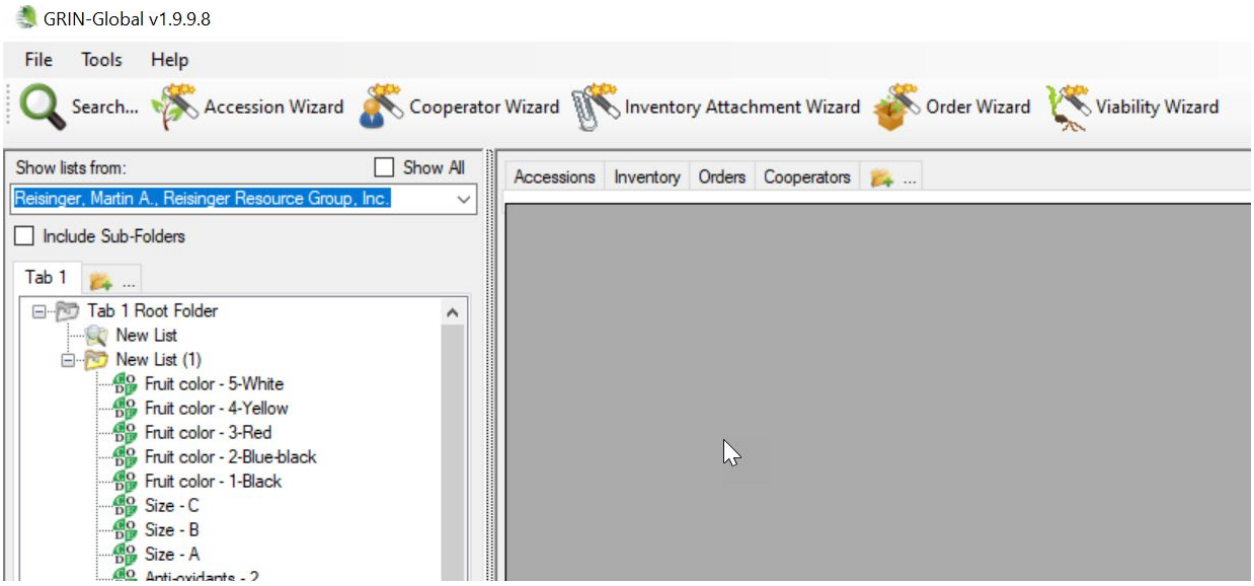

I was able to repeat this. If you close the CT, and then open again, create some tabs/lists, then click the Save User Settings Now button, the Navigator Tab Properties box displays.

3rd test after clicking the Save button:

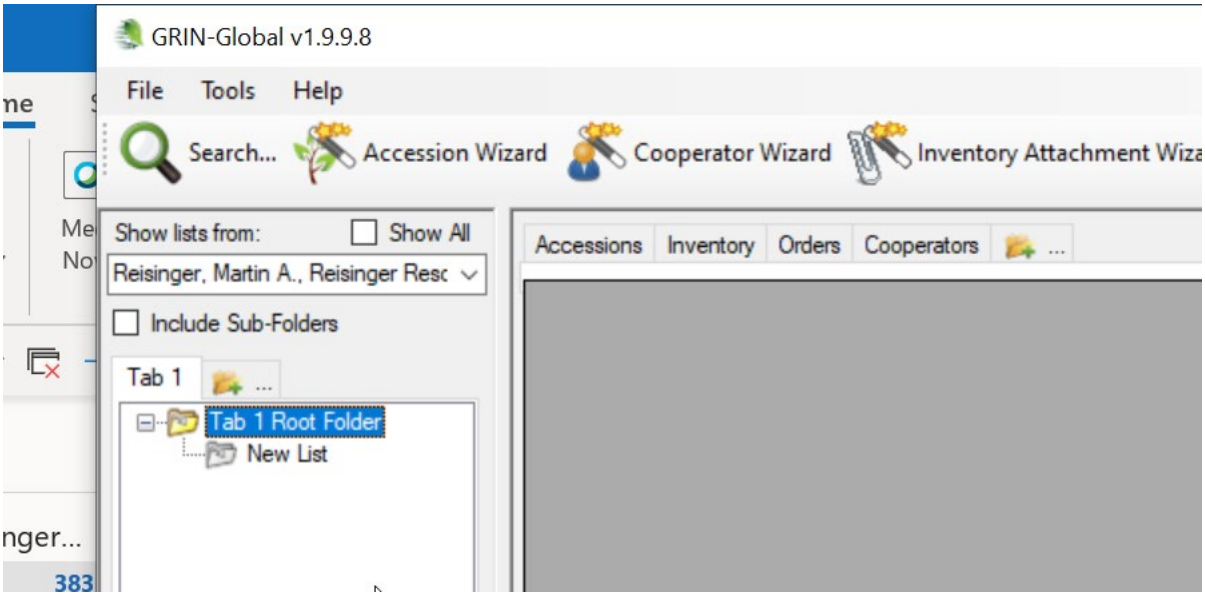

GRIN-Global v1.9.9.8

this record is displaying, but items are in the remaining list

2nd test

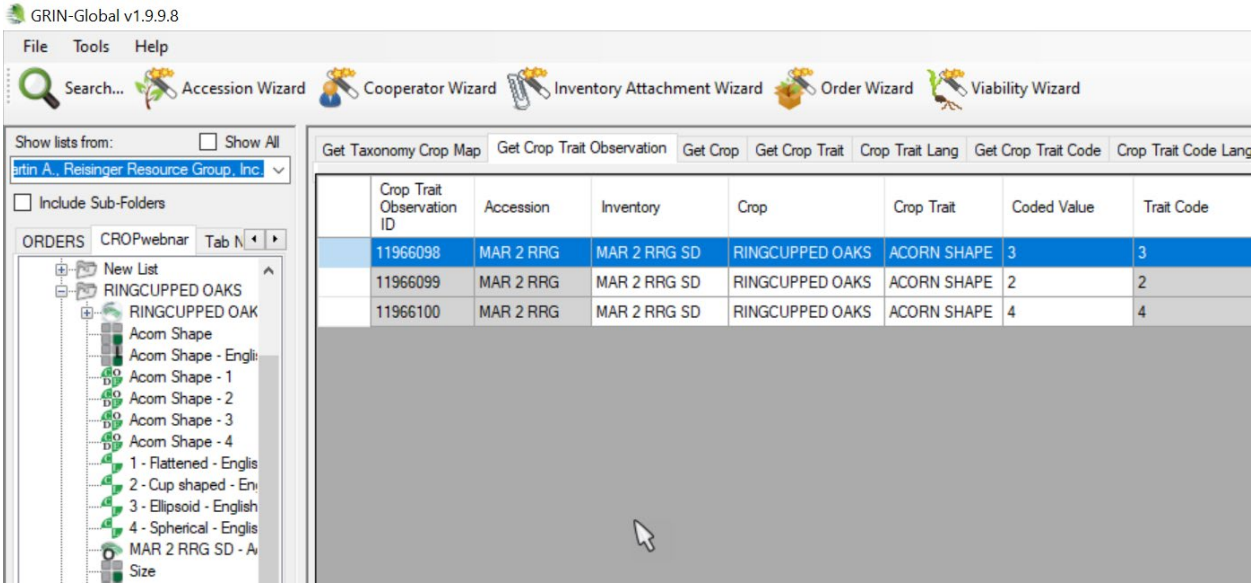

created two folders and added items from ST

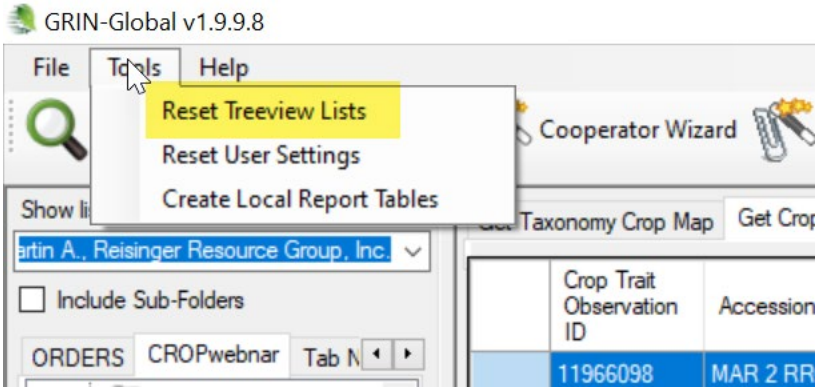

2nd test – came back: stuff is missing

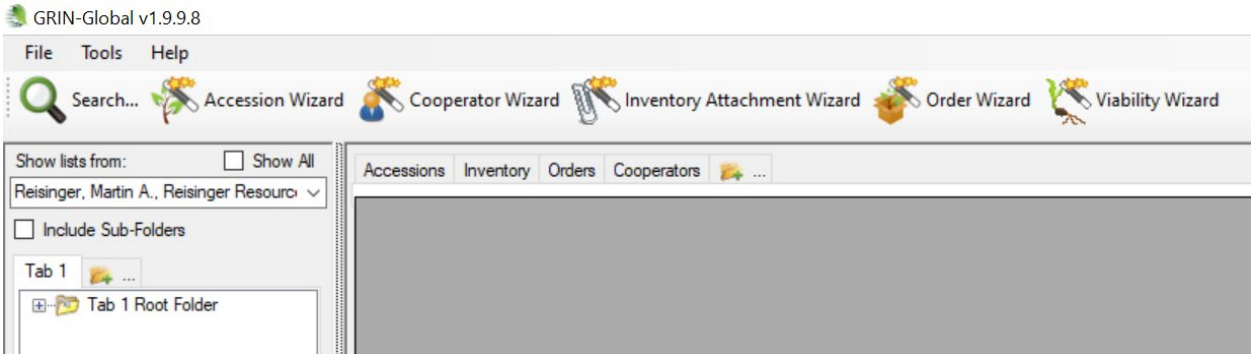

Test 1

I reset both (shown here Treeview lists highlighted, but did both commands)

Cleared all tabs, folders etc. as expected

I created a folder called “test.” (forgot to screen capture)

Closed the CT. Came back – no “test”
