It looks like we're going to update the data in the database so that numeric_formats for zero do no suppress all zeros and a value of 0 will be shown on the PW.

Lisa, please put in a ticket for Benjamin to update the formats for those with values of 0.

Thanks,
Kay

A few of us in the DBMU have come to the conclusion that this is a data entry issue rather than a PW display issue. The numeric_format has been entered incorrectly for numeric_values of zero. If you want 0.00000 to format as "0.0000" you need a format like ##0.###0.

Fixing all the records in the database where a numeric_value is zero and the format doesn't account for zeros (the # suppresses zeros in the results) such as ###.#### seems to be the best way to handle this problem, since there are over 11K records as such. We're still mulling it over though...

Kay

Kay,

Starting from the SPINACH descriptors in PW. I went to the MONOECIOUS descriptor, and clicked on the 210 to get the low end of the data where 0.0 would be.
