Differences between the Accession Wizard and the stand-alone Accession dataviews (2/22/11)

Wizard Tab	Dataview
Accession tab • Taxonomy • Active Site • Improvement Status • Received Date • Date Precision	Accession • Taxon • Maintenance Site • Level of Improvement • Initial Received Date • Initial Received Date Format
Name tab	Name √
Source tab	Source √ -- except the field order is inconsistent
Pedigree tab •	Pedigree • has Taxonomy field
IPR tab	IPR • has Cooperator Geography
Quarantine tab	Quarantine • has Taxonomy field • has Quarantining Cooperator Geo
Annotation tab	Annotation √
Citation tab	Citation • "Under Construction"
Voucher tab	Voucher • has Taxon field
Action tab	Action √
General differences • field order of the dataviews not always consistent with the respective wizard grid views • behavior of the cursor on lookup fields – no visual clue	use of the headings "Taxon" and "Taxonomy" (if same data, consistency needed)
